

SkySpec Model Configuration Guide

INTRODUCTION

The SkySpec instrument series is highly modular. The flow-charts in this document are meant to help you finding the exact configuration to best meet your individual requirements and guide you through the ordering process.

- 1. Use the first page to identify the basic system type. Click on the instrument symbol or turn over to the indicated page to continue with the corresponding sub-chart.
- 2. Follow the arrows in the sub-chart from top to bottom. On the way you come across the names of all relevant articles. A detailed description for each article can be found in the price list and data sheets. The meaning of the symbols is as follows:

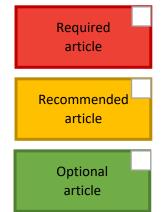

Branching. A decision is required here.

If unsure, check the comments in the price list or the SkySpec datasheets for details.

Red arrows indicate the default pathway.

Rectangles represent actual articles. Colour indicates their necessity (see captions on the left).

When coming across articles to be ordered, gather them on a list or mark them using the checkboxes on the upper right of the rectangle. Checkboxes of required articles are marked by default.

Application
